

SeamsEasy Silicone Tooling Foam

Product # SA03161

DESCRIPTION

No messy cleanup, great results!

This diluent lets you continue to tool the silicone (if necessary) until desired results are achieved.

The best way to work with silicone caulk for fast, professional results!
Smoothing silicone caulk has never been easier.

ADVANTAGES AND BENEFITS

SeamsEasy creates a barrier between you and the silicone. The silicone will stay where it originally made contact and not smear out. The tooling foam does not need to be wiped away. SeamsEasy evaporates without leaving a residue. Allow the new bead of silicone to cure and the area to dry.

TECHNICAL SPECIFICATIONS

Product #	SA03161
Color	White
Method of Application	Vaporize
Format	13.051 oz

APPLICATION

4 easy steps 1- Clean surfaces and apply silicone. (The silicone must be in contact with both sides of the joint.) 2- Spray SeamsEasy Tooling Foam directly on the new silicone. (SeamsEasy creates a barrier between you and the silicone. The silicone will stay where it originally made contact and not smear out.) 3- Dip your finger in the tooling foam and lightly tool the silicone. (Silicone is automatically pressed deep in the seam. SeamsEasy causes any excess silicone to collect nicely on your finger without sticking to you! You're done!) 4- Continue until the desired results are achieved. (The tooling foam does not need to be wiped away. SeamsEasy evaporates without leaving a residue. Allow the new bead of silicone to cure and the area to dry.)
