

Stainless Steel Set Screw

Length

Threaded

DESCRIPTION

The set screw is used most often to assemble and secure two items. The screw goes through a threaded opening in the outside item to impede movement between the two items. This type of screw is used to prevent movement between two rotating parts, such as between a pulley and its shaft.

ADVANTAGES AND BENEFITS

- Stainless steel is highly resistant to corrosion and rust - It can be used in visible locations without detracting from the overall design
